

th such a steady tranquillity, and making so few ripples as he swam, that thinking after all he might not as yet be alarmed, Ahab gave orders that not an oar should be used, and no man must speak but in whispers. So seated like Ontario Indians on the gunwales of the boats, we swiftly but silently paddled along; the calm not admitting of the noiseless sails being set. Presently, as we thus glided in chase, the monster perpendicularly flitted his tail forty feet into the air, and then sank out of sight like a tower swallowed up.

"There go flukes!" was the cry, an announcement immediately followed by Stubb's producing his match and igniting his pipe, for now a respite was granted. After the full interval of his sounding had elapsed, the whale rose again, and being now in advance of the smoker's boat, and much nearer to it than to any of the others, Stubb counted upon the honor of the capture. It was obvious, now, that the whale had at length become aware of his pursuers. All silence of cautiousness was therefore no longer of use. Paddles were dropped, and oars came loudly into play. And still puffing at his pipe, Stubb cheered on his crew to the assault.

Yes, a mighty change had come over the fish. All alive to his jeopardy, he was going "head out"; that part obliquely projecting from the mad yeast which he brewed.\*

\*It will be seen in some other place of what a very light substance the entire interior of the sperm whale's enormous head consists. Though apparently the most massive, it is by far the most buoyant part about him. So that with ease he elevates it in the air, and invariably does so when going at his utmost speed. Besides, such is the breadth of the upper part of the front of his head, and such the tapering cut-water formation of the lower part, that by obliquely elevating his head, he thereby may be said to transform himself from a bluff-bowed sluggish galliot into a sharp-pointed New York pilot-boat.

"Start her, start her, my men! Don't hurry yourselves; take plenty of time—but start her; start her like thunder-claps, that's all," cried Stubb, spluttering out the smoke as he spoke. "Start her, now; give 'em the long and strong stroke, Tashtego. Start her, Tash, my boy—start her, all; but keep cool, keep cool—cucumbers is the word—easy, easy—only start her like grim death and grinning devils, and raise the buried dead perpendicular out of their graves, boys—that's all. Start her!"

"Woo-hoo! Wa-hee!" screamed the Gay-Header in reply, raising some old war-whoop to the skies; as every oarsman in the strained boat involuntarily bounced forward with the one tremendous leading stroke which the eager Indian gave.

But his wild screams were answered by others quite as wild. "Kee-hee! Kee-hee!" yelled Daggoo, straining forwards and backwards on his seat, like a pacing tiger in his cage.

"Ka-la! Koo-loo!" howled Queequeg, as if smacking his lips over a mouthful of Grenadier's steak. And thus with oars and yells the keels cut the sea. Meanwhile, Stubb retaining his place in the van, still encouraged his men to the onset, all the while puffing the smoke from his mouth. Like desperadoes they tugged and they strained, till the welcome cry was heard—"Stand up, Tashtego!—give it to him!" The harpoon was hurled. "Stern all!" The oarsmen backed water; the same moment something went hot and hissing along every one of their wrists. It was the magical line. An instant before, Stubb had swiftly caught two additional turns with it round the loggerhead, whence, by reason of its increased rapid circlings, a hempen blue smoke now jetted up and mingled with the steady fumes from his pipe. As the line passed round and round the loggerhead; so also, just before reaching that point, it blisteringly passed through and through both of Stubb's hands, from which the hand-cloths, or squares of quilted canvas sometimes worn at these times, had accidentally dropped. It was like holding an enemy's sharp two-edged sword by the blade, and that enemy all the time striving to wrest it out of your clutch.

"Wet the line! wet the line!" cried Stubb to the tub oarsman (him seated by the tub) who, snatching off his hat, dashed sea-water into it.\* More turns were taken, so that the line began holding its place. The boat now flew through the boiling water like a shark all fins. Stubb and Tashtego here changed places—stem for stern—a staggering business truly in that rocking commotion.

\*Partly to show the indispensableness of this act, it may here be stated, that, in the old Dutch fishery, a mop was used to dash the running line with water; in many other ships, a wooden piggin, or bailer, is set apart for that purpose. Your hat, however, is the most convenient.

From the vibrating line extending the entire length of the upper part of the boat, and from its now being more tight than a harpstring, you would have thought the craft had two keels—one cleaving the water, the other the air—as the boat churned on through both opposing elements at once. A continual cascade played at the bows; a ceaseless whirling eddy in her wake; and, at the slightest motion from within, even but of a little finger, the vibrating, cracking craft canted over her spasmodic gunwale into the sea. Thus they rushed; each man with might and main clinging to his seat, to prevent being tossed to the foam; and the tall form of Tashtego at the steering oar crouching almost double, in order to bring down his centre of gravity. Whole Atlantics and Pacifics seemed passed as they shot on their way, till at length the whale somewhat slackened his flight.

"Haul in—haul in!" cried Stubb to the bowsman! and, facing round towards the whale, all hands began pulling the boat up to him, while yet the boat was being towed on. Soon ranging up by his flank, Stubb, firmly planting his knee in the clumsy cleat, darted dart after dart into the flying fish; at the word of command, the boat alternately sterning out of the way of the whale's horrible wallow, and then ranging up for another fling.

The red tide now poured from all sides of the monster like brooks down a hill. His tormented body rolled not in brine but in blood, which bubbled and seethed for furlongs behind in their wake. The slanting sun playing upon this crimson pond in the sea, sent back its reflection into every face, so that they all glowed to each other like red men. And all the while, jet after jet of white smoke was agonizingly shot from the spiracle of the whale, and vehement puff after puff from the mouth of the excited headsman; as at every dart, hauling in upon his crooked lance (by the line attached to it), Stubb straightened it again and again, by a few rapid blows against the gunwale, then again and again sent it into the whale.

"Pull up—pull up!" he now cried to the bowsman, as the waning whale relaxed in his wrath. "Pull up!—close to!" and the boat ranged along the fish's flank. When reaching far over the bow, Stubb slowly churned his long sharp lance into the fish, and kept it there, carefully churning and churning, as if cautiously seeking to feel after some gold watch that the whale might have swallowed, and which he was fearful of breaking ere he could hook it out. But that gold watch he sought was the innermost life of the fish. And now it is struck; for, starting from his trance into that unspeakable thing called his "flurry," the monster horribly wallowed in his blood, overwrapped himself in impenetrable, mad, boiling spray, so that the imperilled craft, instantly dropping astern, had much ado blindly to struggle out from that phrensied twilight into the clear air of the day.

And now abating in his flurry, the whale once more rolled out into view; surging from side to side; spasmodically dilating and contracting his spout-hole, with sharp, cracking, agonized respirations. At last, gush after gush of clotted red gore, as if it had been the purple lees of red wine, shot into the frightened air; and falling back again, ran dripping down his motionless flanks into the sea. His heart had burst!

"He's dead, Mr. Stubb," said Daggoo.

"Yes; both pipes smoked out!" and withdrawing his own from his mouth,

Stubb scattered the dead ashes over the water; and, for a moment, stood thoughtfully eyeing the vast corpse he had made.

#### CHAPTER 62. The Dart.

A word concerning an incident in the last chapter.

According to the invariable usage of the fishery, the whale-boat pushes off from the ship, with the headsman or whale-killer as temporary steersman, and the harpooneer or whale-fastener pulling the foremost oar, the one known as the harpooneer-oar. Now it needs a strong, nervous arm to strike the first iron into the fish; for often, in what is called a long dart, the heavy implement has to be flung to the distance of twenty or thirty feet. But however prolonged and exhausting the chase, the harpooneer is expected to pull his oar meanwhile to the uttermost; indeed, he is expected to set an example of superhuman activity to the rest, not only by incredible rowing, but by repeated loud and intrepid exclamations; and what it is to keep shouting at the top of one's compass, while all the other muscles are strained and half started--what that is none know but those who have tried it. For one, I cannot bawl very heartily and work very recklessly at one and the same time. In this straining, bawling state, then, with his back to the fish, all at once the exhausted harpooneer hears the exciting cry--"Stand up, and give it to him!" He now has to drop and secure his oar, turn round on his centre half way, seize his harpoon from the crotch, and with what little strength may remain, he essays to pitch it somehow into the whale. No wonder, taking the whole fleet of whalers in a body, that out of fifty fair chances for a dart, not five are successful; no wonder that so many hapless harpooneers are madly cursed and disrated; no wonder that some of them actually burst their blood-vessels in the boat; no wonder that some sperm whalers are absent four years with four barrels; no wonder that to many ship owners, whaling is but a losing concern; for it is the harpooneer that makes the voyage, and if you take the breath out of his body how can you expect to find it there when most wanted!

Again, if the dart be successful, then at the second critical instant, that is, when the whale starts to run, the boatheader and harpooneer likewise start to running fore and aft, to the imminent jeopardy of themselves and every one else. It is then they change places; and the headsman, the chief officer of the little craft, takes his proper station in the bows of the boat.

Now, I care not who maintains the contrary, but all this is both foolish and unnecessary. The headsman should stay in the bows from first to last; he should both dart the harpoon and the lance, and no rowing whatever should be expected of him, except under circumstances obvious to any fisherman. I know that this would sometimes involve a slight loss of speed in the chase; but long experience in various whalers of more than one nation has convinced me that in the vast majority of failures in the fishery, it has not by any means been so much the speed of the whale as the before described exhaustion of the harpooneer that has caused them.

To insure the greatest efficiency in the dart, the harpooneers of this world must start to their feet from out of idleness, and not from out of toil.

#### CHAPTER 63. The Crotch.

Out of the trunk, the branches grow; out of them, the twigs. So, in productive subjects, grow the chapters.

The crotch alluded to on a previous page deserves independent mention. It is a notched stick of a peculiar form, some two feet in length, which is perpendicularly inserted into the starboard gunwale near the bow, for the purpose of furnishing a rest for the wooden extremity of the harpoon, whose other naked, barbed end slopingly projects from the prow. Thereby the weapon is instantly at hand to its hurler, who snatches it up as readily from its rest as a backwoodsman swings his rifle from the wall. It is customary to have two harpoons reposing in the crotch, respectively called the first and second irons.

But these two harpoons, each by its own cord, are both connected with the line; the object being this: to dart them both, if possible, one instantly after the other into the same whale; so that if, in the coming drag, one should draw out, the other may still retain a hold. It is a doubling of the chances. But it very often happens that owing to the instantaneous, violent, convulsive running of the whale upon receiving the first iron, it becomes impossible for the harpooneer, however lightning-like in his movements, to pitch the second iron into him. Nevertheless, as the second iron is already connected with the line, and the line is running, hence that weapon must, at all events, be anticipatorily tossed out of the boat, somehow and somewhere; else the most terrible jeopardy would involve all hands. Tumbled into the water, it accordingly is in such cases; the spare coils of box line (mentioned in a preceding chapter) making this feat, in most instances, prudently practicable. But this critical act is not always unattended with the saddest and most fatal casualties.

Furthermore: you must know that when the second iron is thrown overboard, it thenceforth becomes a dangling, sharp-edged terror, skittishly curvetting about both boat and whale, entangling the lines, or cutting them, and making a prodigious sensation in all directions. Nor, in general, is it possible to secure it again until the whale is fairly captured and a corpse.

Consider, now, how it must be in the case of four boats all engaging one unusually strong, active, and knowing whale; when owing to these qualities in him, as well as to the thousand concurring accidents of such an audacious enterprise, eight or ten loose second irons may be simultaneously dangling about him. For, of course, each boat is supplied with several harpoons to bend on to the line should the first one be ineffectually darted without recovery. All these particulars are faithfully narrated here, as they will not fail to elucidate several most important, however intricate passages, in scenes hereafter to be painted.

#### CHAPTER 64. Stubb's Supper.

Stubb's whale had been killed some distance from the ship. It was a calm; so, forming a tandem of three boats, we commenced the slow business of towing the trophy to the Pequod. And now, as we eighteen men with our thirty-six arms, and one hundred and eighty thumbs and fingers, slowly toiled hour after hour upon that inert, sluggish corpse in the sea; and it seemed hardly to budge at all, except at long intervals; good evidence was hereby furnished of the enormousness of the mass we moved. For, upon the great canal of Hang-Ho, or whatever they call it, in China, four or five laborers on the foot-path will draw a bulky freighted junk at the rate of a mile an hour; but this grand argosy we towed heavily forged along, as if laden with pig-lead in bulk.

Darkness came on; but three lights up and down in the Pequod's main-rigging dimly guided our way; till drawing nearer we saw Ahab dropping one of several more lanterns over the bulwarks. Vacantly eyeing the heaving whale for a moment, he issued the usual orders for securing it for the night, and then handing his lantern to a seaman, went his way into the cabin, and did not come forward again until morning.

Though, in overseeing the pursuit of this whale, Captain Ahab had evinced his customary activity, to call it so; yet now that the creature was dead, some vague dissatisfaction, or impatience, or despair, seemed working in him; as if the sight of that dead body reminded him that Moby Dick was yet to be slain; and though a thousand other whales were brought to his ship, all that would not one jot advance his grand, monomaniac object. Very soon you would have thought from the sound on the Pequod's decks, that all hands were preparing to cast anchor in the deep; for heavy chains are being dragged along the deck, and thrust rattling out of the port-holes. But by those clanking links, the vast corpse itself, not the ship, is to be moored. Tied by

the head to the stern, and by the tail to the bows, the whale now lies with its black hull close to the vessel's and seen through the darkness of the night, which obscured the spars and rigging aloft, the two-ship and whale, seemed yoked together like colossal bullocks, whereof one reclines while the other remains standing.\*

\*A little item may as well be related here. The strongest and most reliable hold which the ship has upon the whale when moored alongside, is by the flukes or tail; and as from its greater density that part is relatively heavier than any other (excepting the side-fins), its flexibility even in death, causes it to sink low beneath the surface; so that with the hand you cannot get at it from the boat, in order to put the chain round it. But this difficulty is ingeniously overcome: a small, strong line is prepared with a wooden float at its outer end, and a weight in its middle, while the other end is secured to the ship. By adroit management the wooden float is made to rise on the other side of the mass, so that now having girdled the whale, the chain is readily made to follow suit; and being slipped along the body, is at last locked fast round the smallest part of the tail, at the point of junction with its broad flukes or lobes.

If moody Ahab was now all quiescence, at least so far as could be known on deck, Stubb, his second mate, flushed with conquest, betrayed an unusual but still good-natured excitement. Such an unwonted bustle was he in that the staid Starbuck, his official superior, quietly resigned to him for the time the sole management of affairs. One small, helping cause of all this liveliness in Stubb, was soon made strangely manifest. Stubb was a high liver; he was somewhat intemperately fond of the whale as a flavorish thing to his palate.

"A steak, a steak, ere I sleep! You, Daggoo! overboard you go, and cut me one from his small!"

Here be it known, that though these wild fishermen do not, as a general thing, and according to the great military maxim, make the enemy defray the current expenses of the war (at least before realizing the proceeds of the voyage), yet now and then you find some of these Nantucketers who have a genuine relish for that particular part of the Sperm Whale designated by Stubb; comprising the tapering extremity of the body.

About midnight that steak was cut and cooked; and lighted by two lanterns of sperm oil, Stubb stoutly stood up to his spermaceti supper at the capstan-head, as if that capstan were a sideboard. Nor was Stubb the only banqueter on whale's flesh that night. Mingling their mumblings with his own mastications, thousands on thousands of sharks, swarming round the dead leviathan, smackingly feasted on its fatness. The few sleepers below in their bunks were often startled by the sharp slapping of their tails against the hull, within a few inches of the sleepers' hearts. Peering over the side you could just see them (as before you heard them) wallowing in the sullen, black waters, and turning over on their backs as they scooped out huge globular pieces of the whale of the bigness of a human head. This particular feat of the shark seems all but miraculous. How at such an apparently unassailable surface, they contrive to gouge out such symmetrical mouthfuls, remains a part of the universal problem of all things. The mark they thus leave on the whale, may best be likened to the hollow made by a carpenter in countersinking for a screw.

Though amid all the smoking horror and diabolism of a sea-fight, sharks will be seen longingly gazing up to the ship's decks, like hungry dogs round a table where red meat is being carved, ready to bolt down every killed man that is tossed to them; and though, while the valiant butchers over the deck-table are thus cannibally carving each other's live meat with carving-knives all gilded and tasselled, the sharks, also, with their jewel-hilted mouths, are quarrelsome carving away under the table at the dead meat; and though, were you to turn the whole affair upside down, it would still be pretty much the same thing, that is to say, a shocking sharkish business enough for all parties; and though sharks also are the invariable outriders of all slave ships

crossing the Atlantic, systematically trotting alongside, to be handy in case a parcel is to be carried anywhere, or a dead slave to be decently buried; and though one or two other like instances might be set down, touching the set terms, places, and occasions, when sharks do most socially congregate, and most hilariously feast; yet is there no conceivable time or occasion when you will find them in such countless numbers, and in gayer or more jovial spirits, than around a dead sperm whale, moored by night to a whaleship at sea. If you have never seen that sight, then suspend your decision about the propriety of devil-worship, and the expediency of conciliating the devil. But, as yet, Stubb heeded not the mumblings of the banquet that was going on so nigh him, no more than the sharks heeded the smacking of his own epicurean lips.

"Cook, cook!—where's that old Fleece?" he cried at length, widening his legs still further, as if to form a more secure base for his supper; and, at the same time darting his fork into the dish, as if stabbing with his lance; "cook, you cook!—sail this way, cook!"

The old black, not in any very high glee at having been previously roused from his warm hammock at a most unseasonable hour, came shambling along from his galley, for, like many old blacks, there was something the matter with his knee-pans, which he did not keep well scoured like his other pans; this old Fleece, as they called him, came shuffling and limping along, assisting his step with his tongs, which, after a clumsy fashion, were made of straightened iron hoops; this old Ebony floundered along, and in obedience to the word of command, came to a dead stop on the opposite side of Stubb's sideboard; when, with both hands folded before him, and resting on his two-legged cane, he bowed his arched back still further over, at the same time sideways inclining his head, so as to bring his best ear into play.

"Cook," said Stubb, rapidly lifting a rather reddish morsel to his mouth, "don't you think this steak is rather overdone? You've been beating this steak too much, cook; it's too tender. Don't I always say that to be good, a whale-steak must be tough? There are those sharks now over the side, don't you see they prefer it tough and rare? What a shindy they are kicking up! Cook, go and talk to 'em; tell 'em they are welcome to help themselves civilly, and in moderation, but they must keep quiet. Blast me, if I can hear my own voice. Away, cook, and deliver my message. Here, take this lantern," snatching one from his sideboard; "now then, go and preach to 'em!"

Sullenly taking the offered lantern, old Fleece limped across the deck to the bulwarks; and then, with one hand dropping his light low over the sea, so as to get a good view of his congregation, with the other hand he solemnly flourished his tongs, and leaning far over the side in a mumbling voice began addressing the sharks, while Stubb, softly crawling behind, overheard all that was said.

"Fellow-critters: I've ordered here to say dat you must stop dat dam noise dare. You hear? Stop dat dam smackin' ob de lip! Massa Stubb say dat you can fill your dam bellies up to de hatchings, but by Gor! you must stop dat dam racket!"

"Cook," here interposed Stubb, accompanying the word with a sudden slap on the shoulder,— "Cook! why, damn your eyes, you mustn't swear that way when you're preaching. That's no way to convert sinners, cook!"

"Who dat? Den preach to him yourself," sullenly turning to go.

"No, cook; go on, go on."

"Well, den, Belubed fellow-critters:—"

"Right!" exclaimed Stubb, approvingly, "coax 'em to it; try that," and Fleece continued.

"Do you is all sharks, and by natur wery voracious, yet I zay to you, fellow-critters, dat dat voraciousness—'top dat dam slappin' ob de tail! How you tink to hear, spouse you keep up such a dam slappin' and bitin' dare?"

"Cook," cried Stubb, collaring him, "I won't have that swearing. Talk to 'em gentlemanly."

Once more the sermon proceeded.

"Your woraciousness, fellow-critters, I don't blame ye so much for; dat is natur, and can't be helped; but to govern dat wicked natur, dat is de pint. You is sharks, sartin; but if you govern de shark in you, why den you be angel; for all angel is not'ing more dan de shark well governed. Now, look here, bred'ren, just try wonst to be cibil, a helping yourselbs from dat whale. Don't be tearin' de blubber out your neighbour's mout, I say. Is not one shark dood right as toder to dat whale? And, by Gor, none on you has de right to dat whale; dat whale belong to some one else. I know some o' you has berry brig mout, brigger dan oders; but den de brig mouts sometimes has de small bellies; so dat de brigness of de mout is not to swaller wid, but to bit off de blubber for de small fry ob sharks, dat can't get into de scrouge to help demselves."

"Well done, old Fleece!" cried Stubb, "that's Christianity; go on."

"No use goin' on; de dam willains will keep a scougin' and slappin' each oder, Massa Stubb; dey don't hear one word; no use a-preachin' to such dam g'uttons as you call 'em, till dare bellies is full, and dare bellies is bottomless; and when dey do get 'em full, dey wont hear you den; for den dey sink in de sea, go fast to sleep on de coral, and can't hear not'ing at all, no more, for eber and eber."

"Upon my soul, I am about of the same opinion; so give the benediction, Fleece, and I'll away to my supper."

Upon this, Fleece, holding both hands over the fishy mob, raised his shrill voice, and cried—

"Cussed fellow-critters! Kick up de damndest row as ever you can; fill your dam' bellies 'till dey bust—and den die."

"Now, cook," said Stubb, resuming his supper at the capstan; "stand just where you stood before, there, over against me, and pay particular attention."

"All dention," said Fleece, again stooping over upon his tongs in the desired position.

"Well," said Stubb, helping himself freely meanwhile; "I shall now go back to the subject of this steak. In the first place, how old are you, cook?"

"What dat do wid de 'teak," said the old black, testily.

"Silence! How old are you, cook?"

"'Bout ninety, dey say," he gloomily muttered.

"And you have lived in this world hard upon one hundred years, cook, and don't know yet how to cook a whale-steak?" rapidly bolting another mouthful at the last word, so that morsel seemed a continuation of the question. "Where were you born, cook?"

"'Hind de hatchway, in ferry-boat, goin' ober de Roanoke."

"Born in a ferry-boat! That's queer, too. But I want to know what country you were born in, cook!"

"Didn't I say de Roanoke country?" he cried sharply.

"No, you didn't, cook; but I'll tell you what I'm coming to, cook. You must go home and be born over again; you don't know how to cook a whale-steak yet."

"Bress my soul, if I cook noder one," he growled, angrily, turning round to depart.

"Come back, cook;—here, hand me those tongs;—now take that bit of steak there, and tell me if you think that steak cooked as it should be? Take it, I say"—holding the tongs towards him—"take it, and taste it."

Faintly smacking his withered lips over it for a moment, the old negro muttered, "Best cooked 'teak I eber taste; joosy, berry joosy."

"Cook," said Stubb, squaring himself once more; "do you belong to the church?"

"Passed one once in Cape-Down," said the old man sullenly.

"And you have once in your life passed a holy church in Cape-Town, where you doubtless overheard a holy parson addressing his hearers as his beloved fellow-creatures, have you, cook! And yet you come here, and tell me such a dreadful lie as you did just now, eh?" said Stubb.

"Where do you expect to go to, cook?"

"Go to bed berry soon," he mumbled, half-turning as he spoke.

"Avast! heave to! I mean when you die, cook. It's an awful question.

Now what's your answer?"

"When dis old brack man dies," said the negro slowly, changing his whole air and demeanor, "he hisself won't go nowhere; but some bressed angel will come and fetch him."

"Fetch him? How? In a coach and four, as they fetched Elijah? And fetch him where?"

"Up dere," said Fleece, holding his tongs straight over his head, and keeping it there very solemnly.

"So, then, you expect to go up into our main-top, do you, cook, when you are dead? But don't you know the higher you climb, the colder it gets? Main-top, eh?"

"Didn't say dat t'all," said Fleece, again in the sulks.

"You said up there, didn't you? and now look yourself, and see where your tongs are pointing. But, perhaps you expect to get into heaven by crawling through the lubber's hole, cook; but, no, no, cook, you don't get there, except you go the regular way, round by the rigging. It's a ticklish business, but must be done, or else it's no go. But none of us are in heaven yet. Drop your tongs, cook, and hear my orders. Do ye hear? Hold your hat in one hand, and clap t'other a'top of your heart, when I'm giving my orders, cook. What! that your heart, there?—that's your gizzard! Aloft! aloft!—that's it—now you have it. Hold it there now, and pay attention."

"All 'dention," said the old black, with both hands placed as desired, vainly wriggling his grizzled head, as if to get both ears in front at one and the same time.

"Well then, cook, you see this whale-steak of yours was so very bad, that I have put it out of sight as soon as possible; you see that, don't you? Well, for the future, when you cook another whale-steak for my private table here, the capstan, I'll tell you what to do so as not to spoil it by overdoing. Hold the steak in one hand, and show a live coal to it with the other; that done, dish it; d'ye hear? And now to-morrow, cook, when we are cutting in the fish, be sure you stand by to get the tips of his fins; have them put in pickle. As for the ends of the flukes, have them soused, cook. There, now ye may go."

But Fleece had hardly got three paces off, when he was recalled.

"Cook, give me cutlets for supper to-morrow night in the mid-watch.

D'ye hear? away you sail, then.—Halloa! stop! make a bow before you go.—Avast heaving again! Whale-balls for breakfast—don't forget."

"Wish, by gor! whale eat him, 'stead of him eat whale. I'm bressed if he ain't more of shark dan Massa Shark hisself," muttered the old man, limping away; with which sage ejaculation he went to his hammock.

#### CHAPTER 65. The Whale as a Dish.

That mortal man should feed upon the creature that feeds his lamp, and, like Stubb, eat him by his own light, as you may say; this seems so outlandish a thing that one must needs go a little into the history and philosophy of it.

It is upon record, that three centuries ago the tongue of the Right Whale was esteemed a great delicacy in France, and commanded large prices there. Also, that in Henry VIIIth's time, a certain cook of the court obtained a handsome reward for inventing an admirable sauce to be eaten with barbacued porpoises, which, you remember, are a species of whale. Porpoises, indeed, are to this day considered fine eating. The meat is made into balls about the size of billiard balls, and being well seasoned and spiced might be taken for turtle-balls or veal balls. The old monks of Dunfermline were very fond of them. They had a great porpoise grant from the crown.

The fact is, that among his hunters at least, the whale would by all hands be considered a noble dish, were there not so much of him; but when you come to sit down before a meat-pie nearly one hundred feet long, it takes away your appetite. Only the most unprejudiced of men

like Stubb, nowadays partake of cooked whales; but the Esquimaux are not so fastidious. We all know how they live upon whales, and have rare old vintages of prime old train oil. Zogranda, one of their most famous doctors, recommends strips of blubber for infants, as being exceedingly juicy and nourishing. And this reminds me that certain Englishmen, who long ago were accidentally left in Greenland by a whaling vessel—that these men actually lived for several months on the mouldy scraps of whales which had been left ashore after trying out the blubber. Among the Dutch whalers these scraps are called "fritters"; which, indeed, they greatly resemble, being brown and crisp, and smelling something like old Amsterdam housewives' dough-nuts or oly-cooks, when fresh. They have such an eatable look that the most self-denying stranger can hardly keep his hands off.

But what further depreciates the whale as a civilized dish, is his exceeding richness. He is the great prize ox of the sea, too fat to be delicately good. Look at his hump, which would be as fine eating as the buffalo's (which is esteemed a rare dish), were it not such a solid pyramid of fat. But the spermaceti itself, how bland and creamy that is; like the transparent, half-jellied, white meat of a cocoanut in the third month of its growth, yet far too rich to supply a substitute for butter. Nevertheless, many whalers have a method of absorbing it into some other substance, and then partaking of it. In the long try watches of the night it is a common thing for the seamen to dip their ship-biscuit into the huge oil-pots and let them fry there awhile. Many a good supper have I thus made.

In the case of a small Sperm Whale the brains are accounted a fine dish. The casket of the skull is broken into with an axe, and the two plump, whitish lobes being withdrawn (precisely resembling two large puddings), they are then mixed with flour, and cooked into a most delectable mess, in flavor somewhat resembling calves' head, which is quite a dish among some epicures; and every one knows that some young bucks among the epicures, by continually dining upon calves' brains, by and by get to have a little brains of their own, so as to be able to tell a calf's head from their own heads; which, indeed, requires uncommon discrimination. And that is the reason why a young buck with an intelligent looking calf's head before him, is somehow one of the saddest sights you can see. The head looks a sort of reproachfully at him, with an "Et tu Brute!" expression.

It is not, perhaps, entirely because the whale is so excessively unctuous that landmen seem to regard the eating of him with abhorrence; that appears to result, in some way, from the consideration before mentioned: i.e. that a man should eat a newly murdered thing of the sea, and eat it too by its own light. But no doubt the first man that ever murdered an ox was regarded as a murderer; perhaps he was hung; and if he had been put on his trial by oxen, he certainly would have been; and he certainly deserved it if any murderer does. Go to the meat-market of a Saturday night and see the crowds of live bipeds staring up at the long rows of dead quadrupeds. Does not that sight take a tooth out of the cannibal's jaw? Cannibals? who is not a cannibal? I tell you it will be more tolerable for the Fejee that salted down a lean missionary in his cellar against a coming famine; it will be more tolerable for that provident Fejee, I say, in the day of judgment, than for thee, civilized and enlightened gourmand, who nailest geese to the ground and featest on their bloated livers in thy paté-de-foie-gras.

But Stubb, he eats the whale by its own light, does he? and that is adding insult to injury, is it? Look at your knife-handle, there, my civilized and enlightened gourmand dining off that roast beef, what is that handle made of?—what but the bones of the brother of the very ox you are eating? And what do you pick your teeth with, after devouring that fat goose? With a feather of the same fowl. And with what quill did the Secretary of the Society for the Suppression of Cruelty to Ganders formally indite his circulars? It is only within the last month

or two that that society passed a resolution to patronize nothing but steel pens.

#### CHAPTER 66. The Shark Massacre.

When in the Southern Fishery, a captured Sperm Whale, after long and weary toil, is brought alongside late at night, it is not, as a general thing at least, customary to proceed at once to the business of cutting him in. For that business is an exceedingly laborious one; is not very soon completed; and requires all hands to set about it. Therefore, the common usage is to take in all sail; lash the helm a'lee; and then send every one below to his hammock till daylight, with the reservation that, until that time, anchor-watches shall be kept; that is, two and two for an hour, each couple, the crew in rotation shall mount the deck to see that all goes well.

But sometimes, especially upon the Line in the Pacific, this plan will not answer at all; because such incalculable hosts of sharks gather round the moored carcass, that were he left so for six hours, say, on a stretch, little more than the skeleton would be visible by morning. In most other parts of the ocean, however, where these fish do not so largely abound, their wondrous voracity can be at times considerably diminished, by vigorously stirring them up with sharp whaling-spades, a procedure notwithstanding, which, in some instances, only seems to tickle them into still greater activity. But it was not thus in the present case with the Pequod's sharks; though, to be sure, any man unaccustomed to such sights, to have looked over her side that night, would have almost thought the whole round sea was one huge cheese, and those sharks the maggots in it.

Nevertheless, upon Stubb setting the anchor-watch after his supper was concluded; and when, accordingly, Queequeg and a fore-castle seaman came on deck, no small excitement was created among the sharks; for immediately suspending the cutting stages over the side, and lowering three lanterns, so that they cast long gleams of light over the turbid sea, these two mariners, darting their long whaling-spades, kept up an incessant murdering of the sharks,\* by striking the keen steel deep into their skulls, seemingly their only vital part. But in the foamy confusion of their mixed and struggling hosts, the marksmen could not always hit their mark; and this brought about new revelations of the incredible ferocity of the foe. They viciously snapped, not only at each other's disembowelments, but like flexible bows, bent round, and bit their own; till those entrails seemed swallowed over and over again by the same mouth, to be oppositely voided by the gaping wound. Nor was this all. It was unsafe to meddle with the corpses and ghosts of these creatures. A sort of generic or Pantheistic vitality seemed to lurk in their very joints and bones, after what might be called the individual life had departed. Killed and hoisted on deck for the sake of his skin, one of these sharks almost took poor Queequeg's hand off, when he tried to shut down the dead lid of his murderous jaw.

\*The whaling-spade used for cutting-in is made of the very best steel; is about the bigness of a man's spread hand; and in general shape, corresponds to the garden implement after which it is named; only its sides are perfectly flat, and its upper end considerably narrower than the lower. This weapon is always kept as sharp as possible; and when being used is occasionally honed, just like a razor. In its socket, a stiff pole, from twenty to thirty feet long, is inserted for a handle. "Queequeg no care what god made him shark," said the savage, agonizingly lifting his hand up and down; "wedder Fejee god or Nantucket god; but de god wat made shark must be one dam Ingin."

#### CHAPTER 67. Cutting In.

It was a Saturday night, and such a Sabbath as followed! Ex officio professors of Sabbath breaking are all whalers. The ivory Pequod was turned into what seemed a shamble; every sailor a butcher. You would have thought we were offering up ten thousand red oxen to the sea gods. In the first place, the enormous cutting tackles, among other ponderous things comprising a cluster of blocks generally painted green, and

which no single man can possibly lift--this vast bunch of grapes was swayed up to the main-top and firmly lashed to the lower mast-head, the strongest point anywhere above a ship's deck. The end of the hawser-like rope winding through these intricacies, was then conducted to the windlass, and the huge lower block of the tackles was swung over the whale; to this block the great blubber hook, weighing some one hundred pounds, was attached. And now suspended in stages over the side, Starbuck and Stubb, the mates, armed with their long spades, began cutting a hole in the body for the insertion of the hook just above the nearest of the two side-fins. This done, a broad, semicircular line is cut round the hole, the hook is inserted, and the main body of the crew striking up a wild chorus, now commence heaving in one dense crowd at the windlass. When instantly, the entire ship careens over on her side; every bolt in her starts like the nail-heads of an old house in frosty weather; she trembles, quivers, and nods her frightened mast-heads to the sky. More and more she leans over to the whale, while every gasping heave of the windlass is answered by a helping heave from the billows; till at last, a swift, startling snap is heard; with a great swash the ship rolls upwards and backwards from the whale, and the triumphant tackle rises into sight dragging after it the disengaged semicircular end of the first strip of blubber. Now as the blubber envelopes the whale precisely as the rind does an orange, so is it stripped off from the body precisely as an orange is sometimes stripped by spiralizing it. For the strain constantly kept up by the windlass continually keeps the whale rolling over and over in the water, and as the blubber in one strip uniformly peels off along the line called the "scarf," simultaneously cut by the spades of Starbuck and Stubb, the mates; and just as fast as it is thus peeled off, and indeed by that very act itself, it is all the time being hoisted higher and higher aloft till its upper end grazes the main-top; the men at the windlass then cease heaving, and for a moment or two the prodigious blood-dripping mass sways to and fro as if let down from the sky, and every one present must take good heed to dodge it when it swings, else it may box his ears and pitch him headlong overboard.

One of the attending harpooneers now advances with a long, keen weapon called a boarding-sword, and watching his chance he dexterously slices out a considerable hole in the lower part of the swaying mass. Into this hole, the end of the second alternating great tackle is then hooked so as to retain a hold upon the blubber, in order to prepare for what follows. Whereupon, this accomplished swordsman, warning all hands to stand off, once more makes a scientific dash at the mass, and with a few sidelong, desperate, lunging slicings, severs it completely in twain; so that while the short lower part is still fast, the long upper strip, called a blanket-piece, swings clear, and is all ready for lowering. The heavers forward now resume their song, and while the one tackle is peeling and hoisting a second strip from the whale, the other is slowly slackened away, and down goes the first strip through the main hatchway right beneath, into an unfurnished parlor called the blubber-room. Into this twilight apartment sundry nimble hands keep coiling away the long blanket-piece as if it were a great live mass of plaited serpents. And thus the work proceeds; the two tackles hoisting and lowering simultaneously; both whale and windlass heaving, the heavers singing, the blubber-room gentlemen coiling, the mates scarfing, the ship straining, and all hands swearing occasionally, by way of assuaging the general friction.

#### CHAPTER 68. The Blanket.

I have given no small attention to that not unvexed subject, the skin of the whale. I have had controversies about it with experienced whalemens afloat, and learned naturalists ashore. My original opinion remains unchanged; but it is only an opinion.

The question is, what and where is the skin of the whale? Already you know what his blubber is. That blubber is something of the consistence of firm, close-grained beef, but tougher, more elastic and compact, and

ranges from eight or ten to twelve and fifteen inches in thickness. Now, however preposterous it may at first seem to talk of any creature's skin as being of that sort of consistence and thickness, yet in point of fact these are no arguments against such a presumption; because you cannot raise any other dense enveloping layer from the whale's body but that same blubber; and the outermost enveloping layer of any animal, if reasonably dense, what can that be but the skin? True, from the unmarred dead body of the whale, you may scrape off with your hand an infinitely thin, transparent substance, somewhat resembling the thinnest shreds of isinglass, only it is almost as flexible and soft as satin; that is, previous to being dried, when it not only contracts and thickens, but becomes rather hard and brittle. I have several such dried bits, which I use for marks in my whale-books. It is transparent, as I said before; and being laid upon the printed page, I have sometimes pleased myself with fancying it exerted a magnifying influence. At any rate, it is pleasant to read about whales through their own spectacles, as you may say. But what I am driving at here is this. That same infinitely thin, isinglass substance, which, I admit, invests the entire body of the whale, is not so much to be regarded as the skin of the creature, as the skin of the skin, so to speak; for it were simply ridiculous to say, that the proper skin of the tremendous whale is thinner and more tender than the skin of a new-born child. But no more of this.

Assuming the blubber to be the skin of the whale; then, when this skin, as in the case of a very large Sperm Whale, will yield the bulk of one hundred barrels of oil; and, when it is considered that, in quantity, or rather weight, that oil, in its expressed state, is only three fourths, and not the entire substance of the coat; some idea may hence be had of the enormousness of that animated mass, a mere part of whose mere integument yields such a lake of liquid as that. Reckoning ten barrels to the ton, you have ten tons for the net weight of only three quarters of the stuff of the whale's skin.

In life, the visible surface of the Sperm Whale is not the least among the many marvels he presents. Almost invariably it is all over obliquely crossed and re-crossed with numberless straight marks in thick array, something like those in the finest Italian line engravings. But these marks do not seem to be impressed upon the isinglass substance above mentioned, but seem to be seen through it, as if they were engraved upon the body itself. Nor is this all. In some instances, to the quick, observant eye, those linear marks, as in a veritable engraving, but afford the ground for far other delineations. These are hieroglyphical; that is, if you call those mysterious cyphers on the walls of pyramids hieroglyphics, then that is the proper word to use in the present connexion. By my retentive memory of the hieroglyphics upon one Sperm Whale in particular, I was much struck with a plate representing the old Indian characters chiselled on the famous hieroglyphic palisades on the banks of the Upper Mississippi. Like those mystic rocks, too, the mystic-marked whale remains undecipherable. This allusion to the Indian rocks reminds me of another thing. Besides all the other phenomena which the exterior of the Sperm Whale presents, he not seldom displays the back, and more especially his flanks, effaced in great part of the regular linear appearance, by reason of numerous rude scratches, altogether of an irregular, random aspect. I should say that those New England rocks on the sea-coast, which Agassiz imagines to bear the marks of violent scraping contact with vast floating icebergs—I should say, that those rocks must not a little resemble the Sperm Whale in this particular. It also seems to me that such scratches in the whale are probably made by hostile contact with other whales; for I have most remarked them in the large, full-grown bulls of the species.

A word or two more concerning this matter of the skin or blubber of the whale. It has already been said, that it is stript from him in long pieces, called blanket-pieces. Like most sea-terms, this one is very

happy and significant. For the whale is indeed wrapt up in his blubber as in a real blanket or counterpane; or, still better, an Indian poncho slipt over his head, and skirting his extremity. It is by reason of this cosy blanketing of his body, that the whale is enabled to keep himself comfortable in all weathers, in all seas, times, and tides. What would become of a Greenland whale, say, in those shuddering, icy seas of the North, if unsupplied with his cosy surtout? True, other
